

Installation Case Study: Christ Church Clevedon

Key Points:

- Complete Building Regeneration
- Phased Installation
- Multi-room Solution
- Roland Digital Audio Desk
- Christie Digital Widescreen Projection

The Project

Working directly for the church but in close liaison with the Architect Chedburn-Dudley and the lead contractor, CS Williams, Production AV have installed a state of the art Audio Visual System for the church regeneration.

An audio system encompassing digital mixing console and multicore, as well as EV Speaker System. A sophisticated video system enables different feeds to be sent to the different screens.

Audio System

A Roland M380 digital desk and Multicore system was selected for ease of use and to enable rapid recall of pre-sets, and remote control via push button interfaces. Electro Voice Zx1i speakers mounted on either side of the Nave give good sound throughout both the main room assisted with fills for the Balcony and with EV Evid ceiling speakers in the additional new spaces allowing the service to be relayed to clearly.

A new control position in the balcony enables a clear view of the stage position and operation of the sound and video equipment from an ergonomic console.

Video System

A pair of Christie Digital LW555 5500 Lumen widescreen projectors mounted under the balcony using long throw lenses to project onto the fixed Da-Lite widescreens at the alter end of the building. An Extron ISM824 Scaling matrix enables the stage inputs and control position VGA inputs, BluRay and camera sources to be sent to the either or both projectors, Large flat panel Stage monitor located on the balcony, and the CAT5 system feeding offices in the new building.

For More Information

If you would like to know more about this particular installation, see details on other work we have undertaken, or would like to discuss your requirements for a particular project, then please don't hesitate to contact us either on:
